## SUMMARY

Motivated and passionate Cybersecurity student pursuing a B.Tech in Computer Science Engineering with a specialization in Cybersecurity. Deeply interested in Ethical Hacking, Penetration Testing, and AI-powered security systems. Skilled in Python, Networking, Linux, and OpenCV with hands-on experience in real-world cybersecurity architectures and computer vision projects. Proven ability to combine analytical thinking with practical technical skills to research, build, and deploy secure software frameworks.

## TECHNICAL SKILLS

|                        |                                                                                |
|------------------------|--------------------------------------------------------------------------------|
| Programming Languages: | Python                                                                         |
| Security & Testing:    | Cybersecurity Fundamentals, Ethical Hacking, Web Security, Penetration Testing |
| Networking & Admin:    | Networking, Computer Networks, Linux, Kali Linux, Wireshark, Nmap              |
| Libraries & Data:      | OpenCV, OCR, Computer Vision Concepts, SQL                                     |
| Tools & Frameworks:    | Git, GitHub, VS Code                                                           |

## FEATURED PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                       |                                   |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------|
| <b>Automatic Number Plate Recognition (ANPR) System - Personal Project</b>                                                                                                                                                                                                                                                                                                                            | <b>Live Link</b>                  |
| <i>AI-Powered Computer Vision Framework</i>                                                                                                                                                                                                                                                                                                                                                           | Python, OpenCV, OCR, Git & GitHub |
| <ul style="list-style-type: none"><li>Developed an AI-powered ANPR system utilizing Python and OpenCV to automate real-time vehicle data capture.</li><li>Implemented vehicle number plate detection and high-accuracy text extraction leveraging OCR tools.</li><li>Applied core computer vision concepts and managed the full project lifecycle and code repository using Git and GitHub.</li></ul> |                                   |

## EXPERIENCE

|                                                                                                                                                                                                                                                                                            |                                    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|
| <b>Cybersecurity &amp; AI Developer - Real-world Projects</b>                                                                                                                                                                                                                              | <b>Live Link</b>                   |
| <i>Security Architecture &amp; Penetration Testing</i>                                                                                                                                                                                                                                     | Linux, Kali Linux, Nmap, Wireshark |
| <ul style="list-style-type: none"><li>Engineered and optimized real-world cybersecurity protocols and AI-based application modules.</li><li>Gained comprehensive hands-on practice deploying Linux tools, configuring networks, and navigating penetration testing environments.</li></ul> |                                    |

## EDUCATION

|                                                                                        |                         |
|----------------------------------------------------------------------------------------|-------------------------|
| <b>Sir Padampat Singhania University, Udaipur</b>                                      | <b>CGPA 6.0</b>         |
| <i>Bachelor of Technology (B.Tech) in Computer Science Engineering (Cybersecurity)</i> | 2023 - Present          |
| <b>Narayana Junior College</b>                                                         | <b>Marks: 667</b>       |
| <i>Higher Secondary Education (Class XII)</i>                                          | August 2020 - June 2022 |
| <b>Sri Sai Chaitanya High School</b>                                                   | <b>GPA 9.2</b>          |
| <i>Secondary Education (Class X)</i>                                                   | June 2019 - May 2020    |

## ACHIEVEMENTS & ADDITIONAL INFORMATION

- Published and presented a formal research paper titled "AI-Powered Dynamic Malware Detection" at Sir Padampat Singhania University during the RTSDST'25 International Convention (2025).
- Core technical capabilities demonstrated across Problem Solving, Team Collaboration, Quick Learning, and Analytical Thinking with a focus on Cybersecurity Research.
- Languages:** English, Hindi, Telugu
